

Gender awareness in the prevention of sexual violence

Gender awareness aspects in the prevention of sexual violence against girls and boys: Quality criteria and good practice

03/2022 – 12/2022

Initiator

Netzwerk zur Prävention von sexualisierter Gewalt gegen Kinder und Jugendliche

Objectives

In Austria there are numerous institutions that provide practical prevention work for girls and boys. There was a lack of transparent scientifically developed quality criteria for gender-aware prevention. For this reason, the Österreichische Netzwerk zur Prävention von sexualisierter Gewalt gegen Kinder und Jugendliche developed quality standards for the gender-aware prevention of sexual violence against girls and boys. The standards are based on literature and participative research. The target groups were organisations of practical prevention, stakeholders and experts.

Implementation

queraum carried out a process evaluation. The focus of this evaluation was to support the development and implementation of the research. The queraum team offered counseling in the field of social research to support the project team in planning the research, preparing the semi-structured interviews and developing the questionnaire. A ongoing exchange was provided in joint reflection meetings.
